

ARE YOU HAVING TROUBLE CONTROLLING YOUR SEVERE ASTHMA?

Do you use **2 or more** different asthma controller medications?
Have you experienced **2 or more** asthma exacerbations in the
past year that required medical attention?

If YES to both of these questions you MAY be eligible to participate in a clinical study for an investigational medicine that might help your asthma.

- Most monthly study visits involve fasting blood tests, urine tests, lung function tests, taking vital signs, ECG and dispensing of study drug by injection. Study medication and asthma medication will be provided free of charge.
- You will be required to make morning and evening diary entries into an electronic device provided to you as well as breath into a PEF meter.
- The study will last a full year and at the end you may be able to enter an extension study.
- You can choose to discontinue the study drug at any time but you will be asked to continue study visits. You will be compensated \$45.00 for each of your study visits.

***If interested in this clinical trial, please contact Dr.
Nabil S. Andrawis at the Manassas Clinical Research
Center at 571-222-6800 or at
